The 17th Year of an intensive one year training programme in Oral Implantology

Designed to meet and exceed the GDC requirements for training standards in Implant Dentistry for general dental practitioners.

This unique 'hands-on' Implant Course offers unparalleled surgical time to increase confidence and gain valuable experience. Participants are encouraged to develop at their own pace with the guidance, understanding and flexibility of Dr Tatum's individual teaching abilities.

The course outline is as follows:

- Applied basic science (osseointegration & bone physiology)
- Informed consent and medicolegal considerations
- Patient assessment and treatment planning
- Applied surgical anatomy
- Applied imaging techniques
- Conscious sedation techniques and Immediate Life Support (ILS) certification
- Basic surgical and restorative concepts
- Tatum's flapless bone expansion technique
- Advanced surgical and restorative concepts
- Reconstructive periodontal surgery and aesthetic considerations
- Ramus frame implants
- Custom blade & subperiosteal implants
- Inferior alveolar nerve repositioning
- Principles of clinical governance in implantology
- Management of surgical and prosthetic complications

Professor Hilt Tatum DDS

Dr. Ben Beyqi
PhD MSc FDSRCS(Eng.)
FFDRCS(Irel.)

For those who are unable to attend the 'Complete Year Course' there is an option for participation in any of the individual five day modules. Interested participants are welcome to attend any of our training days free of charge to experience the course first hand and receive objective feedback from past and present course members.

**Course Fee
£9,850 + VAT**

Co-Directors Dr Hilt Tatum and Dr Ben Beyqi continue to strengthen this outstanding course.

Due to increasing demand and oversubscription of last year's course, we are accepting early registrations for the next year's course

Places are limited, schedule this course in now

Course Timetable

23-27th September 2015

- Introduction to the course, faculty and operational procedures
- Case presentation and treatment planning
- Medicolegal issues and informed consent
- Scope of Oral Implantology and historical aspects

21-25th October 2015

- Sedation techniques and Intermediate Life Support certification

25-29th November 2015

- Basic surgical and restorative techniques
- Introduction to bone expansion techniques

9-13th December 2015

- Applied Surgical Anatomy

20-24th January 2016

- Maxillary sinus lift and augmentation techniques
- Evaluation of assignments & MCQs

17-21st February 2016

- Principles of bone grafting and guided bone regeneration

16-20th March 2016

- Non-root form implants and inferior alveolar nerve repositioning

20-24th April 2016

- Occlusal considerations & advanced restorative techniques
- Treatment planning & management of edentulous jaws
- Evaluation of assignments and MCQs

25-29th May 2016

- Soft tissue and aesthetic considerations

15-18th June 2016

- Clinical governance and audit of patient portfolios
- Management of complications
- Final examination
- Graduation dinner

Participant Comments....

"I had not placed any implants prior to this course; any previous knowledge having been obtained by attending short courses and having watched a colleague on his patient. I would recommend this course to both beginners like me as well as experienced implantologists. The participants in my year included dentists who had placed more than 100 implants and also people from Canada and Germany. Because of the way the course is organised, you get to know all the other participants very well creating enjoyable convivial atmosphere with participants from previous years also joining in from time to time.

The course gives a thorough grounding on implant placement, surgical skills, soft tissue management, aseptic technique, sedation, anatomy, resuscitation and many other aspects of implantology. The best aspect of the course is being taken through your learning journey by a teacher who is not only extremely knowledgeable and experienced but also humble and patient who makes you feel inspired and confident. There are plenty of opportunities to place implants and participate in surgeries ranging from simple implant placement to sinus grafting and ramus frame implants."

Daylesh Shah

"The very best continuing education I have taken. It does not matter whether you have or haven't incorporated implants into your practice as yet, this is the course to take."

Tony Dadswell

"I have learned more of oral rehabilitation here than I have done since I started my dental education in 1969. When I came to the course I thought I'd be a listener and a viewer. I had never dreamt of being a doer."

Karin Halgren
