

Practical Surgery, Implantology and Applied Anatomy Dissection Course on Fresh Cadavers at University of Bristol

Friday 10th – Sunday 12th May 2019 in Bristol UK

Friday 1.00pm to Sunday 5.00pm

A Highly Practical Course that deals with the Anatomy that matters to Everyday Dentistry

For Beginners and Experienced Practitioners

Fresh Cadavers, Mainly Practical Hands-on Lectures designed to lead you through each procedure, Limited Attendance

Objectives

To develop confidence in Oral Surgical Procedures

To dissect those Anatomical Structures of the Head Relevant to General Dentistry, Oral Surgery and Implantology.

To assist in the performance of Many Clinical Procedures

About the Course This is a course that offers the opportunity to perform procedures on fresh cadavers, just like the real thing. No formalin smell or stiff tissue as with preserved cadavers but soft tissue that can be retracted and dissected revealing some of the structures that you normally do not wish to see but know are there, somewhere.

This is not a course run by anatomists where you spend unnecessary time dissecting out fascial planes and structures that are irrelevant to everyday dentistry.

Everything is relevant to everyday dentistry.

Comments by Previous Participants

“The Stuart Orton-Jones Anatomy course is the most practical, useful and appropriate course for all dentists practising or embarking on the field of surgical dentistry.

Working on fresh cadavers is really just like performing surgery on a live patient – it’s that realistic’

“The Practical Surgery, Implantology and Applied Anatomy Dissection Course is one of the best organised and most thorough that I have ever taken. Everything is directly applicable. The value of this course is immeasurable”

This is a unique course where surgical skills can be practiced and enhanced without risk and is of great benefit to novices and experts alike. It has given me the confidence to exceed and succeed in my professional career.”

“This is a fantastic hands-on dissection course using fresh cadavers in an excellent facility. A must for people doing implants.”

“You are a genius, what more can I say.”

“When I was a student professors concentrated too much on didactics. If only we had someone like you to teach us what really matters.”

“You are the first true innovator in Dental Teaching that I know of and am proud to be in your contact book.”

“Yours presentations are excellent.”

“The Stuart Orton-Jones courses are the most practical, useful and appropriate course for all dentists.”

“The best organized and most thorough that I have ever taken. Everything is directly applicable. The value of this course is immeasurable.”

“These are fantastic hands-on courses.”

Comments by the Originator and Presenter of this course

“I was stimulated to devise this course after becoming frustrated by several anatomy courses I attended in Europe and the United States. Too much time was spent on irrelevant information and irrelevant dissection of structures I was not interested in. I therefore went to the Bristol Dissection Department and dissected what I wanted to see and did oral surgery implant procedures that I wanted to do. I then devised this course and conducted it in the United Kingdom and in the United States. The response from participants has been amazing.” Stuart Orton-Jones
